

CARROT FIBRE

Made from a by-product of carrot juice production, carrot fibre delivers enhanced volume, moisture retention, and stability across a variety of applications. With high water-binding and swelling capacities, it can be easily incorporated into food products without requiring high shear, providing immediate functional benefits.

Applications

- Fillings
- Sauces
- Bakery
- Gluten-Free

KEY FEATURES

- **Instant swelling capacity**

Instantly swells after water contact, without high shear.

- **Bulking Agent**

Enhances the overall volume in a variety of food products

- **Water Binding**

Maintains moisture and extends shelf life by holding water tightly.

BENEFITS

Carrot fibre is derived from the by-products of carrot juice production, making it a sustainable, clean label ingredient. Labelled simply as carrot fibre, it boosts fibre and moisture content in a variety of food products without affecting flavour or appearance. Its rapid, pronounced swelling capacity, combined with its excellent water binding properties, helps maintain moisture, yield, and stability of foods. With excellent process stability, carrot fibre is a great alternative to traditional thickeners and emulsifiers.
