

COCOA FIBRE

As a high-quality byproduct of chocolate and cocoa production, cocoa fibre is a cost-effective option for partially replacing cocoa powder. With a rich cocoa aroma and deep brown hue, cocoa fibre is a versatile addition to chocolate formulations, while its higher fibre content and lower calorie and fat content can support nutritional goals.

Applications

- Beverages
- Spreads
- Cocoa Replacement
- Bakery

KEY FEATURES

- **Nutrient Dense**

Fewer calories, less fat, and more fibre than traditional cocoa powder.

- **Cost Reduction**

A clean-label cocoa powder replacement that offers cost savings.

- **Retains Moisture**

Binds more water and oil than traditional cocoa powder, improving moisture and texture of finished goods.

BENEFITS

Cocoa fibre is a natural dietary fibre obtained from cocoa beans as a by-product of chocolate production. Simply labelled as cocoa fibre, it has a deep brown hue and rich cocoa notes, making it a cost-effective option for partially replacing cocoa powder in various applications. With a higher fibre content, fewer calories, and less fat than traditional cocoa powder, cocoa fibre can support nutritional goals, while its higher water and oil binding properties help improve moisture retention and texture.
