

MODIFIED CELLULOSE

Modified cellulose is a thickening agent and texture improver that offers unique gelling and emulsifying properties. As a thermally reversible gel, it is ideal for structure and stability in a variety of food products.

Applications

- Frozen
- Gluten-Free
- Fillings
- Plant-based

KEY FEATURES

- **Thermally Reversible**

Gels when heated and returns to original consistency at room temperature.

- **Texture Improvement**

Improves texture of gluten-free and plant-based food products.

- **Emulsification**

Stabilizes water-oil systems.

BENEFITS

Modified cellulose has thermally reversible properties making it easy to incorporate and and ideal for stabilizing and preventing blowout in fillings. In gluten-free applications, it mimics gluten network by trapping air bubbles with a strong gel structure. It's also useful for giving plant-based meats improved texture and mouthfeel.
