

RESISTANT WHEAT STARCH

Resistant wheat starch is a specialized form of wheat starch that is fermented in the large intestine as a dietary fibre. With a neutral flavour, bright white colour, and smooth mouthfeel, it has minimal impact on the final sensory characteristics of finished products.

Applications

- Snacks
- Tortillas
- Doughs
- Bakery

KEY FEATURES

- **Minimal Impact**
  Has a smooth mouthfeel, a neutral flavour, and leaves no discolouration.
- **High Fibre Content**
  A specialized form of wheat starch with a dietary fibre content of over 90%.
- **Easy Incorporation**
  Can replace or be added in addition to wheat starch.

BENEFITS

Resistant wheat starch enhances the nutritional profile of products while preserving their taste and texture. As a specialized wheat dietary fibre, its smooth texture allows for easy incorporation and is fully compatible with wheat starch. Resistant wheat starch increases the dietary fibre content in a formulation while reducing digestible carbohydrates. By maintaining important sensory characteristics in your formulation, it is an ideal addition to meet various fibre claims!
